A Guide for Patients and Caregivers

APPROVED USE

WHAT IS KYMRIA^H?

KYMRIA^H (tisagenlecleucel) is made from your own white blood cells and is a prescription cancer treatment used in patients with non-Hodgkin lymphoma that has relapsed (went into remission, then came back) or is refractory (did not go into remission after receiving other lymphoma treatments) after having at least two other kinds of treatment.

IMPORTANT SAFETY INFORMATION

WHAT IS THE MOST IMPORTANT INFORMATION I SHOULD KNOW ABOUT KYMRIA^H?

KYMRIA^H may cause side effects that are severe or life-threatening. Call your health care provider or get emergency help right away if you have any of the following:

- Difficulty breathing
- Chills/shaking chills
- Severe muscle or joint pain
- Fever (100.4°F/38°C or higher)
- Confusion
- Very low blood pressure
- Severe nausea, vomiting, diarrhea
- Dizziness/lightheadedness

It is important that you tell your health care providers that you have received KYMRIA^H. Your health care providers may give you other medicines to treat your side effects.

Please see additional Important Safety Information throughout this brochure.

Please read the KYMRIA[®] (tisagenlecleucel) Medication Guide before you start your treatment. This brochure is based on the Medication Guide and provides educational information. The more you know about your treatment, the more active you can be in your care. Talk with your treatment team if you have questions about your health condition or KYMRIA[®]. This brochure does not take the place of talking with your treatment team.

What is the most important information I should know about KYMRIA[®]?

KYMRIA[®] may cause side effects that are severe or life-threatening. Call your health care provider or get emergency help right away if you get any of the following:

- difficulty breathing
- fever (100.4°F/38°C or higher)
- chills/shaking chills
- confusion
- severe nausea, vomiting, diarrhea
- severe muscle or joint pain
- very low blood pressure
- dizziness/lightheadedness

It is important that you tell your health care providers that you have received KYMRIA[®]. Your health care providers may give you other medicines to treat your side effects.

Please see additional Important Safety Information throughout this brochure.

What is diffuse large B-cell lymphoma?

Your immune system is made up of a variety of cells and organs, all working to protect your body. This includes B cells, T cells, and organs such as lymph nodes. Sometimes there is an abnormal change in an immune cell inside a lymph node. The abnormal immune cell can grow out of control and produce more abnormal cells like it. These abnormal cells, now called *lymphoma cells*, can build up and form tumors wherever immune tissue is found, such as lymph nodes, the spleen, the digestive tract, and bone marrow.

Non-Hodgkin lymphoma (NHL) refers to a group of blood cancers that affect your lymphatic system (immune cells and tissues). Of the more than 30 different subtypes of NHL, diffuse large B-cell lymphoma (DLBCL) is the most common type in the United States.

B cells are a type of cell in your immune system.

What is KYMRIA[®]?

KYMRIA[®] (tisagenlecleucel) is made from your own white blood cells and is a prescription cancer treatment used in patients with non-Hodgkin lymphoma that is refractory (did not go into remission after receiving other lymphoma treatments) or has relapsed (went into remission, then came back) after having at least two other kinds of treatment.

Please see additional Important Safety Information throughout this brochure.

How will I get KYMRIA[®]?

Since KYMRIA[®] (tisagenlecleucel) is made from your own white blood cells, your treatment team has to take some of your blood. This is called “leukapheresis.” It takes 3 to 6 hours and may need to be repeated. A tube (intravenous catheter) will be placed in your vein to collect your blood.

Your blood cells are frozen and sent to the manufacturing site to make KYMRIA[®]. It takes about 3 to 4 weeks from the time your cells are received at the manufacturing site and shipped back to your treatment team, but the time may vary.

Before you get KYMRIA[®], your treatment team may give you chemotherapy for a few days to prepare your body.

When your body is ready, your treatment team will give you KYMRIA[®] through a tube (intravenous catheter) in your vein. This usually takes less than 1 hour.

You should plan to stay within 2 hours of the location where you received your treatment for at least 4 weeks after getting KYMRIA[®]. Your treatment team will check to see if your treatment is working and help you with any side effects that occur.

What should I avoid after receiving KYMRIA[®]?

- Ⓓ Do not drive, operate heavy machinery, or do other dangerous things for 8 weeks after you get KYMRIA[®] because the treatment can cause temporary memory and coordination problems, including sleepiness, confusion, weakness, dizziness, and seizures.
- Ⓓ Do not donate blood, organs, tissues, and cells for transplantation.

Please see additional Important Safety Information throughout this brochure.

What are the possible or reasonably likely side effects of KYMRIA^H?

The most common side effects of KYMRIA^H® (tisagenlecleucel) are:

- difficulty breathing
- fever (100.4°F/38°C or higher)
- chills/shaking chills
- confusion
- severe nausea, vomiting, diarrhea
- severe muscle or joint pain
- very low blood pressure
- dizziness/lightheadedness
- headache

KYMRIA^H can increase the risk of life-threatening infections that may lead to death. Tell your treatment team right away if you develop fever, chills, or any signs or symptoms of an infection.

KYMRIA^H can lower one or more types of your blood cells (red blood cells, white blood cells, or platelets). After treatment, your treatment team will test your blood to check for this. Tell your treatment team right away if you get a fever, are feeling tired, or have bruising or bleeding.

Having KYMRIA^H in your blood may cause a false-positive HIV test result by some commercial tests.

These are not all the possible side effects of KYMRIA^H. Call your treatment team for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088.

Please see additional Important Safety Information throughout this brochure.
